## PREFACE

The dynamic plugin support is based on the backend plugin manager package, which is a service that scans a configured root directory (**dynamicPlugins.rootDirectory** in the app config) for dynamic plugin packages and loads them dynamically.

You can use the dynamic plugins that come preinstalled with Red Hat Developer Hub or install external dynamic plugins from a public NPM registry.

## CHAPTER 1. PREINSTALLED DYNAMIC PLUGINS

Red Hat Developer Hub is preinstalled with a selection of dynamic plugins.

The following preinstalled dynamic plugins are enabled by default:

- `@backstage-community/plugin-analytics-provider-segment`
- `@backstage-community/plugin-scaffolder-backend-module-quay`
- `@backstage-community/plugin-scaffolder-backend-module-regex`
- `@backstage/plugin-events-backend`
- `@backstage/plugin-techdocs`
- `@backstage/plugin-techdocs-backend`
- `@backstage/plugin-techdocs-module-addons-contrib`
- `@red-hat-developer-hub/backstage-plugin-catalog-backend-module-marketplace`
- `@red-hat-developer-hub/backstage-plugin-dynamic-home-page`
- `@red-hat-developer-hub/backstage-plugin-global-floating-action-button`
- `@red-hat-developer-hub/backstage-plugin-global-header`
- `@red-hat-developer-hub/backstage-plugin-marketplace`
- `@red-hat-developer-hub/backstage-plugin-marketplace-backend`
- `@red-hat-developer-hub/backstage-plugin-adoption-insights`
- `@red-hat-developer-hub/backstage-plugin-adoption-insights-backend`
- `@red-hat-developer-hub/backstage-plugin-analytics-module-adoption-insights`
- `@red-hat-developer-hub/backstage-plugin-quickstart`

The dynamic plugins that require custom configuration are disabled by default.

Upon application startup, for each plugin that is disabled by default, the **install-dynamic-plugins init container** within the Developer Hub pod log displays a message similar to the following:

```
===== Skipping disabled dynamic plugin ./dynamic-plugins/dist/backstage-plugin-catalog-backend-  
module-github-dynamic
```

To enable this plugin, add a package with the same name to the Helm chart and change the value in the **disabled** field to 'false'. For example:

```
global:  
  dynamic:  
    includes:  
      - dynamic-plugins.default.yaml
```

plugins:

- **package**: `./dynamic-plugins/dist/backstage-plugin-catalog-backend-module-github-dynamic`  
disabled: `false`

## NOTE

The default configuration for a plugin is extracted from the **dynamic-plugins.default.yaml** file, however, you can use a **pluginConfig** entry to override the default configuration.

## 1.1. RED HAT SUPPORTED PLUGINS

Red Hat supports the following 28 plugins:

## 1.2. TECHNOLOGY PREVIEW PLUGINS

**IMPORTANT**

Red Hat Developer Hub includes a select number of Technology Preview plugins, available for customers to configure and enable. These plugins are provided with support scoped per Technical Preview terms, might not be functionally complete, and Red Hat does not recommend using them for production. These features provide early access to upcoming product features, enabling customers to test functionality and provide feedback during the development process.

For more information on Red Hat Technology Preview features, see [Technology Preview Features Scope](#).

### 1.2.1. Red Hat Technology Preview plugins

Red Hat provides Technology Preview support for the following 56 plugins:

### 1.2.2. Deprecated plugins

#### IMPORTANT

Red Hat Developer Hub (RHDH) includes a number of deprecated plugins, which are no longer being actively developed. It is recommended that if you depend on any of these plugins, you migrate to an alternative solution as soon as possible, as these plugins will be removed in a future release.

RHDH includes the following 2 deprecated plugins:

Name	Plugin	Version	Path and required variables
OCM	<a href="#">@backstage-community/plugin-ocm</a>	5.8.0	./dynamic-plugins/dist/backstage-community-plugin-ocm
